About the Cover:

Kevin Kearney, research engineer (left), and Cherie Miskey, a physics undergraduate co-op student from the Rochester Institute of Technology (right), are preparing to load a cylinder of indium and a disk of copper, respectively, into the OMEGA target chamber through the ports in the top center. These samples are held on a rapid extractor mechanism, which withdraws them after a shot and drops them down the black tube (center) to a diagnostic room below, where their activation is measured to determine the neutron yield. Experiments producing record high neutron yields are reported in this issue.

This report was prepared as an account of work conducted by the Laboratory for Laser Energetics and sponsored by New York State Energy Research and Development Authority, the University of Rochester, the U.S. Department of Energy, and other agencies. Neither the above named sponsors, nor any of their employees, makes any warranty, expressed or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information, apparatus, product, or process disclosed, or represents that its use would not infringe privately owned rights. Reference herein to any specific commercial product, process, or service by trade name, mark, manufacturer, or otherwise, does not necessarily constitute or imply its endorsement, recommendation, or favoring by the United States Government or any agency thereof or any other sponsor. Results reported in the LLE Review should not be taken as necessarily final results as they represent active research. The views and opinions of authors expressed herein do not necessarily state or reflect those of any of the above sponsoring entities.

The work described in this volume includes current research at the Laboratory for Laser Energetics, which is supported by New York State Energy Research and Development Authority, the University of Rochester, the U.S. Department of Energy Office of Inertial Confinement Fusion under Cooperative Agreement No. DE-FC03-92SF19460, and other agencies.

For questions or comments, contact R. Stephen Craxton, Editor, Laboratory for Laser Energetics, 250 East River Road, Rochester, NY 14623-1299, (716) 275-5467.
