# Subpercent Scale Control of 3-D Modes 1, 2, and 3 of Targets Imploded in Direct-Drive Configuration on OMEGA

D.T. Michel **University of Rochester** Laboratory for Laser Energetics

ROCHESTER

### 59th Annual Meeting of the **American Physical Society Division of Plasma Physics** Milwaukee, WI 23-27 October 2017

### Summarv

## Improved drive symmetry has been demonstrated on OMEGA

- In a series of direct-drive implosions, multiple self-emission x-ray images were used to tomographically measure their 3-D modes 1, 2, and 3 at a convergence ratio of ~3
- The target modes were shown to vary linearly with the laser modes from approximately constant static modes
- This demonstrated that the target modes can be mitigated by adjusting the laser beam-energy balance to compensate the static modes

This method was applied to low-adiabat shots and made it possible to reduce the low-mode nonuniformities from 3.5  $\mu$ m to 1  $\mu$ m.

# Self-emission shadowgraphy\* from multiple lines of sight was used to tomographically measure the 3-D modes $\ell = 1$ , $\ell = 2$ , and $\ell = 3$ of targets imploded on OMEGA

\*D. T. Michel et al., Rev. Sci. Instrum. <u>83</u>, 10E530 (2012); D. T. Michel et al., High Power Laser Sci. Eng. <u>3</u>, e19 (2015). \*\*  $Y_{\ell}^{m}$  are the tesseral spherical harmonics, E. T. Whittaker and G. N. Watson, *A Course of Modern Analysis* (Cambridge University Press, 1927), p. 392; *R* ( $\theta$ ,  $\phi$ ) is normalized in percent ( $r_{0}^{0} = 100\%$ ).

# On each camera, the angular variation of the projected ablation contour $R(\theta)$ was determined for an averaged radius of 150 $\mu$ m

The 3-D shape of the target was obtained by orienting the four contours perpendicular to the camera axis.

# The target motion was obtained by comparing the positions of the contours centers with the corresponding contour centers measured on a nonimploding solid CH ball shot

The target motion at 150  $\mu$ m was obtained using linear fits.\*

90th percentile of the student's t distribution

### \* $\delta(\Delta R_{center}) = \pm 1.3 \ \mu m$ , resulting, in $\delta[(\Delta R_{center})_{150}] = \pm 0.6 \ \mu m$ at the

# The 3-D target displacement is located at the intersection of the four lines defined by the camera axis, translated by the measured projected target motions

### Shifted diagnostic line of sight

# For each mode $\ell$ , a linear evolution of the target modes $(\Delta r_{\ell}^{m})$ with the laser beam-energy balance ( $\Delta e_{\ell}^{m}$ ) was measured

\*The laser modes are obtained by minimizing  $\sum$ the averaged beam energy.

$$\sum_{\ell=0}^{3} \sum_{m=-1}^{\ell} \sqrt{4\pi} e_{\ell}^{m} Y_{\ell}^{m} (\theta_{b}, \phi_{b}) - E_{b}, \text{ where is } E_{b},$$

is the beam energy normalized to

This demonstrates that the target modes can be mitigated by adjusting the laser modes to compensate the static modes.

## This method was successfully applied to mitigate the target nonuniformities on a low-adiabat warm implosion

E26770

### Improved drive symmetry has been demonstrated on OMEGA

- In a series of direct-drive implosions, multiple self-emission x-ray images were used to tomographically measure their 3-D modes 1, 2, and 3 at a convergence ratio of ~3
- The target modes were shown to vary linearly with the laser modes from approximately constant static modes
- This demonstrated that the target modes can be mitigated by adjusting the laser beam-energy balance to compensate the static modes

This method was applied to low-adiabat shots and made it possible to reduce the low-mode nonuniformities from 3.5  $\mu$ m to 1  $\mu$ m.

# Over three shots, the beam-energy balance was changed to modify their modes $\ell = 1$ , $\ell = 2$ , $\ell = 3$ , and for m = 0

$$\overline{E} (\theta_{b}, \phi_{b}) = \sum_{\ell=0}^{3} \sum_{m=-1}^{\ell} \sqrt{4\pi} e_{\ell}^{m} Y_{\ell}^{m} (\theta_{b}, \phi_{b})^{*}$$

$$\frac{Shots}{4633 \text{ versus } 84629} -2.2 -2.6 2.4$$

$$4634 \text{ versus } 84629 2.2 2.2 -3.5$$

$$\ell = 3$$

 $C_{\varrho} = \Delta r_{\varrho}^{m} (150 \ \mu m) / \Delta e_{\varrho}^{m}$ 

3

0

The low-mode coupling coefficients were determined by measuring the variation of the target modes  $(\Delta r_{\theta}^{m})$  as a function of the laser beam-energy balance  $(\Delta e_{\theta}^{m})$ .

\*\*The modes are obtained by minimizing

$$\sum_{\ell=0}^{\infty} \sum_{m=-1}^{\infty} \sqrt{4\pi} e_{\ell}^{m} Y_{\ell}^{m} (\theta_{b}, \phi_{b}) - \overline{E}_{b} \text{, where } \overline{E}_{b} \text{ is normalized}$$

8

alized to the averaged beam energy.

## The target modes were obtained by decomposing the four contours translated by the target displacement over spherical harmonics

Errors of  $\delta(r_1^m) = \pm 0.15\%$ ,  $\delta(r_2^m) = \pm 0.1\%$ , and  $\delta(r_3^m) = \pm 0.1\%$  were obtained by simulating the errors in  $[\Delta R(\theta)]_{150}$  and  $[\Delta R_{center}]_{150}$ .

E26772

# The decrease of $C_{\ell}$ with $\ell$ was a result of the beam profiles that modify the amplitude of the laser modes on target\*

- The laser modes are described by minimizing  $(\partial A/\partial e_1^m = 0)$ :  $A = \sum_{b=1}^{60} \left[ \sum_{\ell=0}^{\infty} \sum_{m=-1}^{\ell'} \sqrt{4\pi} e_{\ell}^m Y_{\ell}^m (\Theta_b) \right]$
- This results in
- $\sum_{\mathbf{b}=1}^{60} \left[ \overline{E}_{\mathbf{b}} \mathbf{Y}_{\ell}^{m} \left( \boldsymbol{\Theta}_{\mathbf{b}}, \boldsymbol{\phi}_{\mathbf{b}} \right) \right] = \sum_{\ell'=0}^{\infty} \sum_{m'=-\ell'}^{\ell'} \sqrt{4\pi} \mathbf{e}_{\ell}^{m} \sum_{\mathbf{b}=1}^{60} \left[ \mathbf{Y}_{\ell}^{m} \left( \boldsymbol{\Theta}_{\mathbf{b}}, \boldsymbol{\phi}_{\mathbf{b}} \right) \mathbf{Y}_{\ell'}^{m'} \left( \boldsymbol{\Theta}_{\mathbf{b}}, \boldsymbol{\phi}_{\mathbf{b}} \right) \right]$   $\approx \sum_{\ell'=0}^{\infty} \sum_{m'=-\ell'}^{\ell'} \sqrt{4\pi} \mathbf{e}_{\ell}^{m} \left( 60/4\pi \right) \int_{\Omega} \left[ \mathbf{Y}_{\ell}^{m} \left( \boldsymbol{\Theta}_{\mathbf{b}}, \boldsymbol{\phi}_{\mathbf{b}} \right) \mathbf{Y}_{\ell'}^{m'} \left( \boldsymbol{\Theta}_{\mathbf{b}}, \boldsymbol{\phi}_{\mathbf{b}} \right) \right] \approx \sum_{\ell'=0}^{\infty} \sum_{m'=-\ell'}^{\ell'} \sqrt{4\pi} \mathbf{e}_{\ell}^{m} \left( 60/4\pi \right) \delta_{\ell\ell'} \delta_{mm'} \approx \sqrt{4\pi} \mathbf{e}_{\ell'}^{m} \left( 60/4\pi \right) \delta_{\ell'} \delta_{mm'} \delta_{m$
- The mode decomposition of a single beam energy per solid angle on target is given by

$$\tilde{\boldsymbol{E}}_{\mathsf{b}}(\boldsymbol{\Theta},\boldsymbol{\phi}) = \overline{\boldsymbol{E}}_{\mathsf{b}} \sum_{\ell'=0}^{\infty} \frac{2\ell+1}{4\pi} \boldsymbol{a}_{\ell} \boldsymbol{P}_{\ell}(\cos \gamma) = \overline{\boldsymbol{E}}_{\mathsf{b}} \sum_{\ell=0}^{\infty} \boldsymbol{a}_{\ell} \sum_{m'=-\ell'}^{\infty} \boldsymbol{Y}_{\ell}^{m}(\boldsymbol{\Theta}_{\mathsf{b}},\boldsymbol{\phi}_{\mathsf{b}}) \boldsymbol{Y}_{\ell}^{m}(\boldsymbol{\Theta},\boldsymbol{\phi})$$

The mode decomposition of the total energy per solid angle on target is given by

$$\tilde{E}_{tot}(\Theta, \phi) = \frac{60}{4\pi} \sum_{b=1}^{60} \tilde{E}_{tot}(\Theta, \phi) = \sum_{\ell=0}^{\infty} \sum_{m=-\ell}^{\ell'} \sqrt{4\pi} \tilde{e}_{\ell}^{m} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \frac{4\pi}{60} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \frac{4\pi}{60} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \frac{4\pi}{60} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \frac{4\pi}{60} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \frac{4\pi}{60} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \frac{4\pi}{60} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \frac{4\pi}{60} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \frac{4\pi}{60} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \frac{4\pi}{60} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \frac{4\pi}{60} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \frac{4\pi}{60} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \frac{4\pi}{60} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \frac{4\pi}{60} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \frac{4\pi}{60} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \frac{4\pi}{60} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \frac{4\pi}{60} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{ with: } \tilde{e}_{\ell}^{m} = \frac{a_{\ell}}{\sqrt{4\pi}} \sum_{b=1}^{60} \overline{E}_{b} Y_{\ell}^{m}(\Theta, \phi) \text{$$

$$\left[ \frac{\mathbf{U}\mathbf{R}}{\mathbf{b}}, \boldsymbol{\varphi}_{\mathbf{b}} \right]^2$$

### $(\boldsymbol{\theta}_{\mathbf{b}}, \boldsymbol{\phi}_{\mathbf{b}}) = \boldsymbol{a}_{\ell} \boldsymbol{e}_{\ell}^{\boldsymbol{m}},$

\*S. Skupsky and K. Lee, J. Appl. Phys. <u>54</u>, 3662 (1983).

# The decrease of $C_{\ell}$ with $\ell$ was a result of the beam profiles that modify the amplitude of the laser modes on target\*

The modes of the laser beam energy balance are described by minimizing

$$\boldsymbol{A} = \sum_{b=1}^{60} \left[ \sum_{\ell=0}^{3} \sum_{m=-1}^{\ell} \sqrt{4\pi} \, \boldsymbol{e}_{\ell}^{m} \, \boldsymbol{Y}_{\ell}^{m} \left(\boldsymbol{\theta}_{b}, \boldsymbol{\phi}_{b}\right) - \overline{\boldsymbol{E}}_{b} \right]^{2}$$

• Accounting for the beam profile, the mode decomposition of the total energy per solid angle on target is given by

$$E_{\text{tot}}(\theta,\phi) = \sum_{\ell=0}^{3} \sum_{m=-1}^{\ell} \sqrt{4\pi} e_{\ell}^{m} Y_{\ell}^{m}(\theta,\phi)$$
  
with  $\tilde{e}_{\ell}^{m} = a_{\ell}$ , where  $a_{\ell} = 2\pi \int_{-1}^{1} \overline{E}_{b}(\theta,\phi) P_{\ell}(\cos\gamma) d(\cos\gamma)$ 

A constant coupling of the modes of the target irradiation pattern to the target modes is obtained of  $C_{\varrho}/a_{\varrho} = -0.85 \pm 0.07$ .

\*S. Skupsky and K. Lee, J. Appl. Phys. <u>54</u>, 3662 (1983).

## The 3-D shape of the target was obtained by orienting each contour perpendicular to the camera axis

An error of  $\delta[\Delta R(\theta)]_{150}$  of 1  $\mu$ m was evaluated by comparing the contours at the connecting points; this error is comparable to the error of  $\pm$ 0.4  $\mu$ m estimated previously.

E26775

## This method was applied to correct the target nonuniformities on a low-adiabat warm implosion

ROCHESTER
